

## CARAVAN SECURITY

This leaflet is prepared by The Caravan Club as part of its free information service to members. The contents are believed correct at date of publication, but the current position may be checked with The Club's Information Office. The Club does not endorse the listed products and you should satisfy yourself as to their suitability. As always check that the installation of an after-market accessory does not invalidate your Warranty.

September 2008

Caravan Club figures show thefts of caravans over the last few years as follows:

1994	1647
1995	1267 (down 23.10%)
1996	1270 (up 0.24%)
1997	1197 (down 5.75%)
1998	873 (down 27.00%)
1999	940 (up 7.67%)
2000	1080 (up 14.90%)
2001	940 (down 12.90%)
2002	976 (up 3.80%)
2003	1918 (up 96.52%)
2004	1714 (down 11.90%)
2005	1210 (down 41.60%)
2006	778 (down 53.00%)
2007	679 (down 14.50%)

Very few are ever returned to their original owner, partly because they 'disappear' into an illicit network of buyers and sellers, and partly because, when a caravan is found by the police, all identifying marks have been removed - it is not uncommon for thieves to grind out the VIN number from the caravan windows. Many times the police must return the 'suspect' caravan to the thieves, simply because they cannot prove it belongs to someone else.

The majority of caravans are stolen from storage compounds, closely followed by the home address. Thefts occur all year round and cover all ages of caravan, although newer ones seem most vulnerable.

To avoid becoming another insurance statistic, and to meet most insurers' conditions of acceptance, certain precautions should be taken.

Many caravan security devices are available on the market, from hitchlocks to steady locks, from alarms to wheelclamps. Prices vary from £30 to over £100, and it is very difficult to decide which would be the most effective. There are also alarms and sophisticated tracking systems available costing hundreds of pounds. This leaflet sets out to make the choice easier.

## **HITCHLOCKS**

Only products which envelop the hitch-head and completely cover the securing bolts are considered to meet the highest standard under this category. So called hitchlocks which leave the bolts exposed, and which have no further deterrent, are virtually worthless, as the thief will simply unbolt it and fit one they have brought with them.

A good hitchlock will deter the opportunist thief, and will offer a reasonable degree of protection on site and at roadside halts and motorway service areas, providing you use the type that can lock car and caravan together. (In the interests of safety, it is not recommended that a hitchlock is used which locks the two together when in transit.) However, they are not considered to be sufficient protection when the caravan is in storage or at home, when a professional thief will use a chain or grappling device, making the hitch redundant.

## **WHEELCLAMPS**

Many different types on the market make choice difficult, but generally look for one which appears robust and has a lock which cannot readily be attacked by hacksaw or drill. Any products with thin radiating arms, or exposed locks, are likely to prove vulnerable. Also bear in mind the thief will happily let down the tyre, even if it causes minor damage to the caravan, so look for a product which will not be defeated by such action.

## **WHEEL LOCKS**

Launched in 2005, this is a new type category of security product, similar to a wheelclamp, but fitting through the wheel and locking to the brake assembly. A new Sold Secure Diamond Wheel Lock Standard should ensure such products are highly effective. The Al-Ko system is available in three versions - the Al-Ko Secure Compact, suitable for 2006 model year caravans onwards, fitted with lock receiver at the time of manufacture; the Al-Ko Secure Plus, suitable for 2006 model year caravans onwards, without lock receiver fitted, but with pre-punched fixing holes in brake back plate, and the Al-Ko Secure Premium, suitable for 2001-2005 model caravans, without lock receiver and without pre-punched holes in back plate. The Secure Plus and the Secure Premium must be fitted by a dealer.

An equivalent system for Explorer Group caravans with BPW chassis is also available.

## **ALARMS**

Many different types of caravan alarm are available, with prices, sophistication and reliability varying greatly. Issues such as power consumption during periods of storage and ease of disablement are difficult for purchasers to assess. The Sold Secure Standard for caravan

alarms addresses these and other important issues. At the time of writing only three caravan alarms have passed this standard. The Club hopes that more manufacturers will take up this challenge in the near future.

## **TRACKING SYSTEMS**

Tracking systems enable a caravan to be located after it has been stolen, generally using satellite technology, although the earliest systems used radio signals.

There are various types of system available, however:

- Systems designed primarily for motor vehicles. These may not ideally suit use in trailer caravans, since their power consumption may be too high for use during periods of storage.
- Systems designed primarily for caravan use. These tend to be optimised for caravan use, especially in terms of issues like power consumption. The systems detailed in the table on pages 10 and 11 have additionally passed the requirements of the Sold Secure standard for such products, confirming their suitability for caravan use, their durability and resistance to attack etc. These are the only systems that we consider to have a proven level of performance.
- ‘Monitored’ systems, where any alarm is alerted to a monitoring centre, who can then contact the owner and/or the police.
- ‘Unmonitored’ systems, which usually alert the owner directly, often by mobile phone text messages.

In all cases, the equipment is relatively expensive, and monitored systems additionally incur a significant annual fee for the monitoring service.

It is important to recognise that the effectiveness of all tracking systems depends on being able to not only locate but also to recover the stolen vehicle. This generally requires police involvement, although it is vital to note that the responsibility for recovering a vehicle actually rests with its owner (or any third party contracted by them), and the police are not obliged to carry out recovery work. Current police policy does not guarantee a response to a stolen vehicle report via a tracking system. Forces may respond to reports alerted via a legitimate, accredited monitoring centre, but are far less likely to respond to an alert made directly to the owner. When choosing a tracking system, ask the provider for details of any monitoring centre used, and look for characteristics like the existence of a police-allocated Unique Reference Number and ideally compliance with the Association of Chief Police Officers and Home Office Guidance to Companies on Police Policy relating to Stolen Vehicle Tracking Systems.

Tracking systems are building a reputation for themselves as being an effective way of recovering stolen caravans. Often recovery is very rapid, and before any significant harm has been done to the caravan. The proliferation of systems, and evolving technology has meant that insurance companies can still be reticent about offering premium discounts when such systems are fitted. If considering a tracking system, do not assume that all insurers will recognise it as justifying a discount.

## DATA CHIP SYSTEMS

Quite a number of companies offering data chip/electronic tagging technology have come and gone, and our advice has always been to wait until one or more systems becomes widely accepted by the caravan industry. The principal asset marking system used for caravans has been CRiS (see below). A further asset marking system (Thiefbeaters) has received Sold Secure Approval. This system provides comprehensive marking (etching, microdots and data tags), but does so using its own numbering system, rather than the caravan's CRiS number.

### CRIS (CARAVAN REGISTRATION AND IDENTIFICATION SCHEME)

Since 1992, all touring caravans manufactured by National Caravan Council (NCC) members have been marked on their chassis and on all windows with their unique 17 digit Vehicle Identification Number and these are recorded on the CRiS database. Additionally, all new caravans manufactured by NCC members since August 1997 are electronically tagged during manufacture for added security. From 1999 this scheme was extended to allow pre-1992 and privately imported caravans to be registered in a similar way, and a DIY kit is available for the window etching and glass tag installation. CRiS marking can be further enhanced by using CRiS Xtra Kit (microdot), which links directly to the CRiS number.

Uniquely available to Club members is Silent Tracer, a high-quality security marking system that makes caravans more difficult to steal. It helps combat fraud through 'cloning' and 'ringing' by giving each caravan its own unique tamper-proof identity using the very latest DNA technology. For a competitive price Caravan Club members receive a Silent Tracer DIY security kit comprising an electronic glass tag, Selecta DNA, CRiS Microdots and tamper-resistant labels, as well as a UV tracer to install in their caravan.

Current costs for CRiS services are:

- Registration of new caravan – included in purchase price
- Addition of glass tag to 1992 – 1997 caravans £15.87
- Registration of pre – 1992 caravans – standard price £37.12  
(£5 Discount for Club members) £32.12
- Update of registration details on change of ownership £12.00
- CRiS Enquire (confirmation of name of registered keeper and if Caravan is recorded as stolen written off or on finance) £14.95  
(£5 discount for members) £ 9.95
- CRiS Xtra Kit £39.95
- Caravan Club Silent Tracer £69.95

For further details, telephone CRiS on 01722 411430 (8 am - 8 pm Monday to Friday, 9am – 5 pm Saturday, 10am - 5 pm on Sunday), or e-mail [cris.uk@hpi.co.uk](mailto:cris.uk@hpi.co.uk).

## MISCELLANEOUS

Other security products include posts which are cemented into the ground so the caravan can be secured to it by a hitchlock. Others anchor the caravan chassis to the ground. High security door locks with cylindrical keys are more effective than the standard variety, but beware, if the caravan door has a window in it the thief will simply remove the window and operate the door handle from inside. Steady locks can be overcome by bending the steadies, so are not serious deterrents. Winter wheels replace the road wheels for long term storage, but must be locked securely in position; otherwise the thief will bring his own wheels and swap over. Roof lettering/numbering enables the caravanner to put a unique code on the caravan roof that can be spotted by the police from a helicopter or motorway bridge, or from a road video camera. The year of manufacture and CRiS number could be used; it is often not recommended to use a post code as it could advertise that you are away from home.

## SUMMARY OF ACTIONS TO TAKE

- 1 Become part of the Club's Theftcheck scheme, by ensuring your caravan details are registered with us (tel 01342 318813).
- 2 Immobilise your caravan at all times, even when stopping only briefly.
- 3 Consider a reliable alarm. The initial outlay is set against added security and peace of mind.
- 4 Remove all personal belongings and contents from the caravan whenever it's not in use and leave curtains open, so potential thieves can see nothing of value is inside.
- 5 Take photographs of the exterior and interior of the caravan and keep them at home, along with any registration documents. Make a note of any identifying scratches etc.
- 6 Mark the serial or chassis number in several places inside the caravan, using an ultra violet pen or permanent marker. Make a note of the mark locations.
- 7 Ensure the CRiS registration of your caravan is up to date with details of your ownership, or make sure you register your caravan if it is eligible and you have not already done so.
- 8 Keep a register of the serial numbers of all the accessories fitted, such as refrigerators and cookers.
- 9 Don't choose a storage site on price alone. Consider site security.

If the worst happens and the caravan is stolen, notify the police and insurance company. Give the police a full description, including chassis number and any identifying marks. Even if you are not insured with The Club, contact Theftcheck so the caravan details can be added to the register - it may help with recovery.

## SOLD SECURE

Sold Secure, the Home Office and Police inspired and supported attack test house, is the only fully accredited UK based organisation testing the effectiveness of caravan and trailer security devices. Operating from purpose built premises near Daventry in Northamptonshire, the company works very closely with CITARG, the caravan industry technical committee overseeing security matters in the generation of specifications and security awareness. A division of the Master Locksmiths Association, Sold Secure have developed and launched with CITARG a new specification to keep up to date with the methods used by thieves, and increasing numbers of caravan insurance companies fully recognize the work done for the benefit of the caravanner. Products tested to the 'Silver' standard offer theft resistance aimed at preventing determined attacks. Products tested to the 'Gold' standard offer theft resistance aimed at preventing dedicated attacks. A new 'Diamond' standard has now been developed in conjunction with the NCC (National Caravan Council) for a new class of caravan security called Wheel Locks. Current information on products is available on the Sold Secure website: [www.soldsecure.com](http://www.soldsecure.com), or telephone 01327 264687.

Other approval organisations are TÜV (Germany) and TNO (Holland) - for further information check with the manufacturer. Note that the attack test procedures normally used by these organizations are not specifically designed for caravan products. However, such approval is better than none at all.
