FREEDOM OF INFORMATION REQUEST REFERENCE NO: 01/FOI/26/016668/D

I write in connection with your request for information dated 04/04/2026, received by Greater Manchester Police (GMP) for the following information:

Under the Freedom of Information Act, I would like to request the following information for each calendar year from 2020 to 2026 inclusive:

1. *The number of cyber security breaches that have being identified that were found to be a result of a malicious threat actor (i.e. not accidental data breach)*
2. *The breakdown in high-level causes of these breaches as identified by cyber security incident response teams (CSIRTs), for example (but not limited to) unpatched software/hardware, lack of multi-factor authentication (MFA), leaked user credentials, lack of in-transit encryption, etc*
3. *The number of breaches that occurred that were attributed to a previously known vulnerability to the organisations hardware, software, policies, or processes, for example where system was known to be at risk due to being unpatched or out of support, or security controls were recommended but not enforced, and was defined within the resulting incident response report.*
4. *The estimated combined costs incurred as a result of cyber security breaches defined in request number one in each year.*

No specific details are requested in relation to software/hardware utilisation, but rather high-level causes of breaches. I believe the high-level nature of this request does not allow for the use of s.31(1)(a) of the FOIA as this would not be likely to prejudice the security of your systems or data, as these are historical incidents which have since been dealt with. The public interest

in understanding breach causes across public sector organisations outweighs the public interest in the exemption.

*I would like you to provide the information in Word, Excel, or CSV format.
Please contact me if you need me to clarify my request.*

Result of Searches

We are interpreting the wording of the question, i.e. cyber security “breach” to isolate only cyber security threats which have infiltrated police systems i.e. have been successful.

Greater Manchester Police can neither confirm nor deny that it holds the information you requested as the duty in Section 1(1)(a) of the Freedom of Information Act 2000 does not apply, by virtue of Section 24(2) – National Security and Section 31(3) – Law Enforcement.

Evidence of Harm:

To confirm or deny whether information is held in respect of cyber security breaches identified would provide actual knowledge that where an attempt has been made, it had been successful. Confirming that such information is not held may assist potential attackers by indicating that an attack had gone undetected. Equally, confirming information is held, especially at lower levels of detail, would enable understanding of where attacks have been successful and where possible weaknesses may exist. Attackers may then be able to tailor their methods to increase their chances of success.

Furthermore, in order to counter criminal and terrorist behaviour it is vital that the police and other agencies have the ability to work together, where necessary covertly, in order to obtain intelligence within current legislative frameworks to ensure the arrest and prosecution of offenders who commit or plan to commit acts of terrorism, whereby their modus operandi may involve cyber-attacks on secure databases. In order to achieve this goal, it is vitally important that information sharing takes place with other police forces and security bodies within the United Kingdom to support counter-terrorism measures in the fight to deprive terrorist networks of their ability to commit crime. To confirm or deny specific details of any breaches of information technology and security would be extremely useful to those involved in terrorist activity as it would enable them to map vulnerable information security databases.

Public Interest Considerations

Section 24(2) National Security

Factors in favour of confirming or denying that information is held

The public are entitled to know how public funds are spent and how resources are distributed within an area of policing. To confirm information is held regarding cyber breaches identified by the force would enable the general public to hold the police to account ensuring all such breaches are recorded and investigated appropriately. With the call for transparency of public spending this would enable improved public debate.

Factors against confirming or denying that information is held

Security measures are put in place to protect the community we serve. As evidenced within the harm, to confirm or deny whether any information is held about identified cyber-breaches would highlight to terrorists and individuals' intent on carrying out criminal activity, vulnerabilities within the force which could be further exploited.

Considering the current security climate within the United Kingdom, no information (such as the citing of an exemption which confirms information pertinent to this request is held, or conversely, stating 'no information is held') which may aid a terrorist should be disclosed. To what extent this information may aid a terrorist is unknown, but it will have an impact on a force's ability to monitor terrorist activity.

Irrespective of what information is or isn't held, the public entrust the Police Service to make appropriate decisions regarding their safety and protection and the only way of reducing risk is to be cautious with what is placed into the public domain.

The cumulative effect of terrorists gathering information from various sources would be even more impactful when linked to other information gathered from various sources about terrorism. The more information disclosed over time will give a more detailed account of the tactical infrastructure of not only a force area but also the country as a whole.

Any incident that results from such a disclosure would, by default, affect National Security.

Section 31 – Law Enforcement

Factors favouring confirming or denying that information is held

Confirmation that information exists relevant to this request would lead to a better-informed public which may encourage individuals to provide intelligence to reduce such cyber-security breaches.

Factors against confirming nor denying that information is held.

Confirmation or denial that information is held in this case would suggest the police take their responsibility to protect information and information systems from unauthorised access, destruction, etc., dismissively, and inappropriately.

Balancing Test

The points above highlight the merits of confirming or denying the requested information exists. The Police Service is charged with enforcing the law, preventing and detecting crime and protecting the communities we serve. As part of that policing purpose, information is gathered which can be highly sensitive relating to high profile investigative activity. Weakening the mechanisms used to monitor any type of criminal activity, and specifically terrorist activity would place the security of the country at an increased level of danger.

In addition, anything that places that confidence at risk, no matter how generic, would undermine any trust or confidence individuals have in the Police Service. Therefore, at this moment in time, it is our opinion that for these issues the balance test favours neither confirming nor denying that information is held.
